Downloading partially damaged data from the tachograph

Mechanism for retrieval of partially damaged data (with damaged day certificates) was introduced.

(menu: Data -> Get -> Read digital tachograph)

- options for selecting of the method of saving data when reading files from tachographs with damaged day certificates: **Save the correct data**, **Save all data** and **Do not save**
- in the data download settings window, the selection options: **Download speed**, **Driver card** i **Speed data from VDO tachograph (S-file)**

Reading data from smart tachographs

Reading of data from smart tachographs was added, which will be mandatory in each new vehicle from 15.06.2019

(menu: Data -> Digital tachograph data)

- in the **General and technical data** tab:
 - **Range of stored days** section designation changed into **Downloadable period**
 - distinction into **Digital tachograph** and smart tachograph was added
- in the **Activities on a specific day** tab:
 - **Country and region** cell designation was changed into **Country**
 - **GNSS coordinates** cell designation was changed into **GNSS country**
 - in the row of the cell **GNSS country**  displaying information about GNSS data was added
 - in the row of the cell **GNSS country**  redirecting to the map view was added
 - a vehicle location marker every 3 hours  on the daily and weekly chart was added
- in the **Activities, events and faults in the table** tab:
 - the following column was added **GNSS country**
 - the following event filter was added **GNSS places**
 - the following button was added 

Compare driving time and distance on the map

(menu: Reports -> Compare driving time and distance on the map)

- new functionalities were added:
 - **Show GNSS localizations** (only supports reading from smart tachographs)
 - **Options**
 - option to choose between alternative routes

View/ edit a day from a driver card window

(menu: Data -> Driver card and record sheet data)

- the name of the last column in the **Location** window was modified: **GNSS country**

- the following button was added
- the location report appearance was modified:
 - **Country** column location was changed
 - the following columns were added: **GNSS country**, **GNSS coordinates** and **GNSS date and time**
- in addition, the following modifications for smart tachograph readings were introduced:
 - in the **GNSS country** cell  displaying information about GNSS data was added
 - a new type of event was added: **vehicle location record**
 - a vehicle location marker every 3 hours  on the daily and weekly chart was added

Certificates

- in the tachograph reading summary window, in the **Certificates** tab, the information on the date of entry into force of the certificates was added (applies to smart tachographs)
- in the driver card reading summary window, the **Certificates** tab was divided into the following sections: **Generation 1** i **Generation 2** (for smart tachographs). In section **Generation 2** information on the date of entry into force of the certificate was added

Infringements and manipulations

(menu: Reports -> Infringements and manipulations)

- in the settings window, in **Warnings** tab, two items were added:
 - Warn if the start/end country entry does not match the GNSS location (selected by default)
 - Warn if the date and time of the vehicle location entry differs from the date and time in the GNSS system by X min (default value: 1 min.)
- in the **Manipulation warnings** tab new warning was added:
 - **Place entry does not match GNSS location entry**

Optimization of the program database

- the size of the program database was optimized
