

Date: 21 October 2016

To Whom it may concern,

Essex Police have purchased and installed six licences supplied by Inelo Tachoscan onto Laptops and have been using the software on road checks where Heavy Goods Vehicles and Coaches and other relevant vehicles are stopped at the roadside and have also used the software for analysing data from minor collisions to Serious and Fatal Collisions.

Essex Police Officers who have been using the software are very pleased with it and particularly like the way it is designed for Enforcement purposes. The ease of use of the software from logging in, setting it up and saving data, it is simple and very user friendly and straightforward. Officers like the infringements and manipulation warnings and have all stated that it is laid out in a simple way for reading and understanding.

The download devices which were purchased from Inelo were TachoReader Combo Plus. These have been very reliable and are very quick at capturing data from the Driver Card and Vehicle data, especially when you reprogram them for a short period.

The printing of the Roadside Check Form (212) saves a lot of writing as the boxes are filled in automatically upon generating the form.

Yours faithfully,

*Gary Winfield*
