Experience with TachoScan Control software

CSPSD has been using the program for two years and considers it a very good tool for performing effective controls in road transport. In addition to an accurate analysis of driving and rest times, the program provides a range of useful information on the status and function of the tachograph.

Thanks to quality training, we have gained an overview of the possibilities of using the program in practice.

And what's more, thanks to the large spread among EU control bodies, we can work very well together in cross-border roadside checks.

I really recommend to all who are not completely satisfied with their actual data analysis software.
